

Allot Quality and Environmental Policy

Our Quality and Environmental Policy reflects our commitment to implement high quality and environmental sustainability in everything we do.

Allot has established a firm but dynamic Quality Management System that complies with the requirements of global standards. We are fully certified in standards of ISO-9001, ISO-14001 and ISO 27001 which enable us to consistently improve our efficiency and our environmental awareness. The Allot Quality Management System outlines the structure, responsibilities, and procedures aimed at satisfying or exceeding customer and regulatory requirements and consistently delivering exceptional value.

Our primary goal in implementing the Allot Quality Management System is to consistently strive to deliver high-quality, secure and reliable products, services and solutions the first time, every time and on time - as promised.

Our years of experience have taught us that long-term customer relationships are invaluable and we have made customer satisfaction our utmost priority.

The Allot Quality Management System calls for the designation of annual quality targets that should be made clear to and followed through by each and every staff member. Targets are aimed at reducing waste, errors, and inefficiency; reducing response time, and improving overall customer service and satisfaction.

Allot believes that the active implementation of our quality policy by our personnel is vital. We have adopted the following approach in supporting them: create a work environment that encourages and continually endeavors to improve our people, processes, products and facilities and to be mindful of quality, environment, security and safety issues in everything we do.
